1

Digital Signal Processing

Lecture 3

Phasor Addition Theorem

2

READING ASSIGNMENTS

- This Lecture:
 - Chapter 2, Section 2-6
- Other Reading:
 - Appendix A: Complex Numbers
 - Appendix B: MATLAB
 - Next Lecture: start Chapter 3

4

LECTURE OBJECTIVES

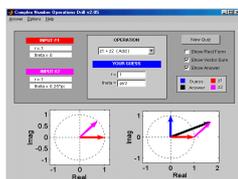

- Phasors = Complex Amplitude
 - Complex Numbers represent Sinusoids

$$z(t) = Xe^{j\alpha t} = (Ae^{j\phi})e^{j\alpha t}$$

- Develop the ABSTRACTION:
 - Adding Sinusoids = Complex Addition
 - **PHASOR ADDITION THEOREM**

5

Z DRILL (Complex Arith)

MATLAB Command Name:
spfirst
zdrill

Complex drill

ZDrill is a program that tests the users ability to calculate the result of simple operations on complex numbers. The program emphasizes the vectorial view of a complex number. The following six operations are supported:
•Add
•Subtract
•Multiply
•Divide
•Inverse
•Conjugate

6

AVOID Trigonometry

- Algebra, even complex, is **EASIER !!!**
- Can you recall $\cos(\theta_1+\theta_2)$?
- Use: real part of $e^{j(\theta_1+\theta_2)} = \cos(\theta_1+\theta_2)$

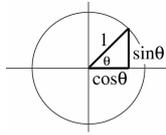

$$\begin{aligned} e^{j(\theta_1+\theta_2)} &= e^{j\theta_1} e^{j\theta_2} \\ &= (\cos \theta_1 + j \sin \theta_1)(\cos \theta_2 + j \sin \theta_2) \\ &= \boxed{\cos \theta_1 \cos \theta_2 - \sin \theta_1 \sin \theta_2} + j(\dots) \end{aligned}$$

7

Euler's FORMULA

- Complex Exponential

- Real part is cosine
- Imaginary part is sine
- Magnitude is one

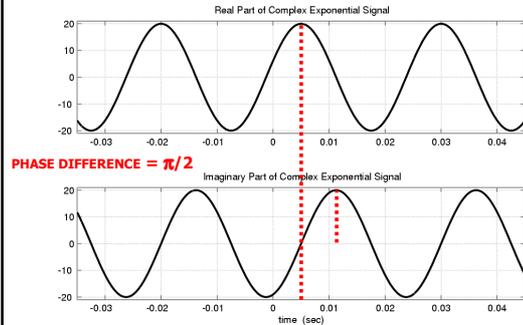

$$e^{j\theta} = \cos(\theta) + j \sin(\theta)$$

$$e^{j\omega t} = \cos(\omega t) + j \sin(\omega t)$$

8

Real & Imaginary Part Plots

9

COMPLEX EXPONENTIAL

$$e^{j\omega t} = \cos(\omega t) + j \sin(\omega t)$$

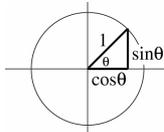

- Interpret this as a **Rotating Vector**

$$\theta = \omega t$$

Angle changes vs. time

ex: $\omega = 20\pi$ rad/s

Rotates 0.2π in 0.01 secs

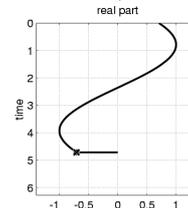

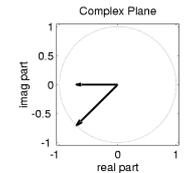

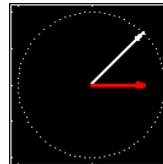

$$e^{j\theta} = \cos(\theta) + j \sin(\theta)$$

10

Rotating Phasor

See Demo on CD-ROM
Chapter 2

11

Cos = REAL PART

Real Part of Euler's

$$\cos(\omega t) = \Re\{e^{j\omega t}\}$$

General Sinusoid

$$x(t) = A \cos(\omega t + \phi)$$

So,

$$A \cos(\omega t + \phi) = \Re\{Ae^{j(\omega t + \phi)}\}$$

$$= \Re\{Ae^{j\phi} e^{j\omega t}\}$$

12

COMPLEX AMPLITUDE

General Sinusoid

$$x(t) = A \cos(\omega t + \phi) = \Re\{Ae^{j\phi} e^{j\omega t}\}$$

Sinusoid = REAL PART of $(Ae^{j\phi})e^{j\omega t}$

$$x(t) = \Re\{Xe^{j\omega t}\} = \Re\{z(t)\}$$

Complex AMPLITUDE = X

$$z(t) = Xe^{j\omega t} \quad X = Ae^{j\phi}$$

13

POP QUIZ: Complex Amp

- Find the COMPLEX AMPLITUDE for:

$$x(t) = \sqrt{3} \cos(77\pi t + 0.5\pi)$$

- Use EULER'S FORMULA:

$$x(t) = \Re e \left\{ \sqrt{3} e^{j(77\pi t + 0.5\pi)} \right\}$$

$$= \Re e \left\{ \sqrt{3} e^{j0.5\pi} e^{j77\pi t} \right\}$$

$$X = \sqrt{3} e^{j0.5\pi}$$

14

WANT to ADD SINUSOIDS

- ALL SINUSOIDS have SAME FREQUENCY
- HOW to GET {Amp,Phase} of RESULT ?

$$x_1(t) = 1.7 \cos(2\pi(10)t + 70\pi/180)$$

$$x_2(t) = 1.9 \cos(2\pi(10)t + 200\pi/180)$$

$$x_3(t) = x_1(t) + x_2(t)$$

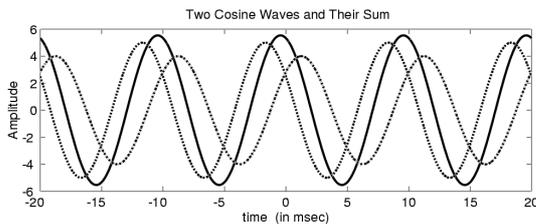

$$= 1.532 \cos(2\pi(10)t + 141.79\pi/180)$$

15

ADD SINUSOIDS

- Sum Sinusoid has SAME Frequency

16

PHASOR ADDITION RULE

$$x(t) = \sum_{k=1}^N A_k \cos(\omega_0 t + \phi_k)$$

$$= A \cos(\omega_0 t + \phi)$$

Get the new complex amplitude by complex addition

$$\sum_{k=1}^N A_k e^{j\phi_k} = A e^{j\phi}$$

17

Phasor Addition Proof

$$\sum_{k=1}^N A_k \cos(\omega_0 t + \phi_k) = \sum_{k=1}^N \Re e \left\{ A_k e^{j(\omega_0 t + \phi_k)} \right\}$$

$$= \Re e \left\{ \sum_{k=1}^N A_k e^{j\phi_k} e^{j\omega_0 t} \right\}$$

$$= \Re e \left\{ \left(\sum_{k=1}^N A_k e^{j\phi_k} \right) e^{j\omega_0 t} \right\}$$

$$= \Re e \left\{ (A e^{j\phi}) e^{j\omega_0 t} \right\} = A \cos(\omega_0 t + \phi)$$

18

POP QUIZ: Add Sinusoids

- ADD THESE 2 SINUSOIDS:

$$x_1(t) = \cos(77\pi t)$$

$$x_2(t) = \sqrt{3} \cos(77\pi t + 0.5\pi)$$

- COMPLEX ADDITION:

$$1e^{j0} + \sqrt{3}e^{j0.5\pi}$$

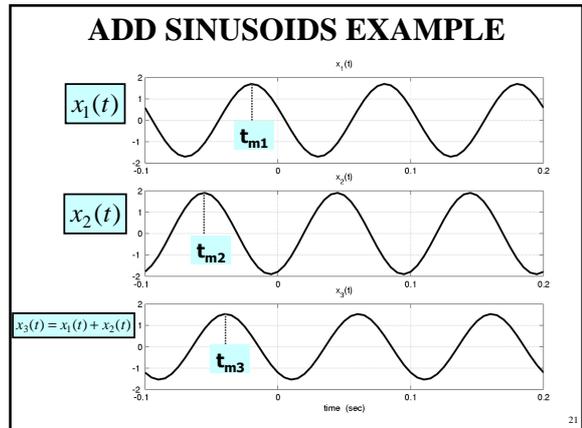

19

POP QUIZ (answer)

- COMPLEX ADDITION: $1 + j\sqrt{3} = 2e^{j\pi/3}$

- CONVERT back to cosine form: $x_3(t) = 2 \cos(77\pi t + \frac{\pi}{3})$

20

Convert Time-Shift to Phase

- Measure **peak times**:
 $t_{m1} = -0.0194, t_{m2} = -0.0556, t_{m3} = -0.0394$
- Convert to **phase** ($T=0.1$)
 $\phi_1 = -\omega t_{m1} = -2\pi(t_{m1}/T) = 70\pi/180,$
 $\phi_2 = 200\pi/180$
- Amplitudes
 $A_1 = 1.7, A_2 = 1.9, A_3 = 1.532$

22

Phasor Add: Numerical

- Convert Polar to Cartesian
 $X_1 = 0.5814 + j1.597$
 $X_2 = -1.785 - j0.6498$
sum =
 $X_3 = -1.204 + j0.9476$
- Convert back to Polar
 $X_3 = 1.532$ at angle $141.79\pi/180$
This is the sum

23

ADD SINUSOIDS

$$x_1(t) = 1.7 \cos(2\pi(10)t + 70\pi/180)$$

$$x_2(t) = 1.9 \cos(2\pi(10)t + 200\pi/180)$$

$$x_3(t) = x_1(t) + x_2(t)$$

$$= 1.532 \cos(2\pi(10)t + 141.79\pi/180)$$

24
